Title of the Project:

E-Commerce Website

Objective:

Design a E-commerce website using HTML,CSS,NodeJS,Express,MongoDB.

Scope:

This application is currently only capable of make payment,track order detail,use filter.

Methodology:

We are going to use html , css and javascript for the frontend part of our and application and nodejs ,express , mongodb and many more dependencies for backend.

Proposed System:

We are going to make a frontend which would be user friendly and interactive. Our basic analogy would be see products by the user according to their demand. The core idea would be frontend as mentioned above and our backend to maintain the contacts and information regarding.

Implementation Plan:

Create a E-commerce website using backend and frontend.

Team Members:

Yogesh Chauhan – Frontend and Backend Developer of the project

Yash kumar singh– Frontend Developer and Presentation holder

Akash Rajput – Frontend Developer and Documentation

Yatin Sisodia – Frontend

Resources Required:

Youtube channel:

https://youtu.be/A_-fn_ij59c?si=6oKLBelEPNmORoVU
